

STRAINER POST STAYS

The Strainer Post Stays are used with strainer posts in free-standing electric fences to secure the posts. The strainer posts are concreted into the ground and secured using two stays at 90 degree angles for corner applications. The strainer posts only require one stay in the direction of tension in an end post application.

Features:

- Round
- 1.5m in total length - diameter of 38mm
- 2.4m in total length - diameter of 38mm
- 2.4m in total length - diameter of 50mm
