

POWDER COATED METAL ENCLOSURES

A powder coated metal enclosure is ideal for housing energizers and accessories. It is weatherproof and can be used outdoors. It has an inspection window for easy viewing of the energiser status without having to unlock the box. This box is mostly used inland due to its powder coated finish. For coastal use we recommend the aluminium or fibreglass enclosures.

Features:

- Inspection window for viewing without opening the door
- Wooden electrically isolated backing plate for mounting the energizers and accessories
